

TOSHAL NARENDRA ZAMBARE DevOps Engineer Cloud & Platform Infrastructure ML Engineer +91-7666853995 toshalzambare1@gmail.com www.toshal.space LinkedIn Github	
SUMMARY	
Final-year B.E. student in AI & Data Science (CGPA 8.7/10) specializing in automated CI/CD pipelines , production microservices , and GitOps . Expert in modern cloud ecosystems, zero-downtime rollouts, and resilient serverless architectures across distributed applications.	
TECHNICAL SKILLS	
Orchestration & GitOps: Kubernetes (KinD), ArgoCD, Docker, Docker Compose, Service Discovery, NGINX Ingress Cloud & CI/CD: AWS (EC2, S3, Lambda, SNS, SQS), GCP, GitHub Actions Pipelines, Serverless Framework Data & Languages: PostgreSQL, MongoDB, Redis, Qdrant, MinIO Python, Bash, C++, C, Dart	
EXPERIENCE	
Deep Learning & Full Stack Intern AI Leela, Nashik Dec 2025 – Feb 2026 - Architected and deployed Knowledge Hub, a production containerized microservices platform utilizing asynchronous workers to aggregate and process large enterprise datasets. - Integrated distributed task queues using Celery and Redis to handle non-blocking, multi-threaded text ingestion and file extractions across PostgreSQL, MinIO object storage, and vector databases. - Engineered server-side event tracking (SSE) and strict session caching protocols, optimizing system performance and ensuring horizontal network stability. Project is live and actively used by AI Leela in production.	
KEY PROJECTS	
XeroxSaaS — Cloud-Native GitOps Platform Live: https://anti-print.vercel.app/ - Constructed an automated CI/CD engine via GitHub Actions for multi-tier apps, building Docker images and pushing snapshots to Docker Hub. (<i>Stack: K8s, ArgoCD, GHA, NGINX, Prometheus, Grafana</i>) - Deployed GitOps architecture using ArgoCD to sync state to local Kubernetes clusters, providing zero-downtime rolling rollouts and eliminating configuration drifts. - Configured NGINX Ingress for traffic routing and Horizontal Pod Autoscaling (HPA) to scale deployments from 1 to 5 replicas based on compute metrics. - Integrated Prometheus, Grafana, and Loki to monitor health, visualize real-time metrics,AWS Automated FinOps Bot & Fault-Tolerant Kill-Switch - Designed an event-driven FinOps auto-termination pipeline intercepting budget breaches via AWS Budgets and flagging them to consumer queues using Amazon SNS. - Engineered a worker queue model using Amazon SQS with Visibility Timeouts, triggering localized cleanups via agents executing automated scripts. - Established Dead-Letter Queue (DLQ) topology routing unprocessed payloads to AWS Lambda to automatically stop services like EC2, RDS, and EKS.	
EDUCATION	
B.E. in Artificial Intelligence & Data Science SPPU Higher Secondary (Class 12) Ord. Factory High School and Jr. College Expected 2027 CGPA: 8.7/10 2023 72.67%	
ACHIEVEMENTS & LEADERSHIP	
1st Place – Cricketthon Hackathon, GDG (2026) 3rd Place – HackFusion Hackathon (2025) Cloud Lead – GDG at MET Open-Source Contributor
